

RED HAT" ENTERPRISE LINUX

# **RED HAT ENTERPRISE LINUX 7** TECHNICAL OVERVIEW

Scott McCarty Senior Solutions Architect, Red Hat 01/12/2015

Hadoop Performance Tuning | Scott McCarty | smccarty@redhat.com

#### **Performance Tuning Overview**

- Little's Law: **L** = **A** x **W** (Queue Length = Average Arrival Rate x Wait Time)
  - The length of the waiting line for a resource depends on the average rate at which new requests arrive multiplied by the average amount of time a request spends in the system.
- Wait Time: W = S + Q (Wait Time = Service Time + Queue Time)
  - The sum of the amount of time the request waits for a resource to become available combined with the amount of time it takes to service the request.
- Queue Stability & Forced Flow Law
  - For a queue to maintain the same length, the rate at which new requests arrive must be the same as the rate at which requests are completed
  - System Throughput = Resource Throughput x Resource Visit Count

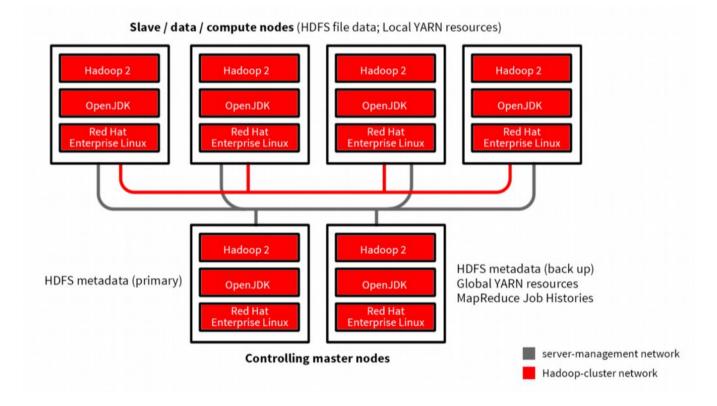

## **Performance Tuning Overview (continued)**

- Variables
  - Latency
  - Throughput
  - Power Usage
  - Jitter
- Standard Process
  - Baseline -> Make Change -> New Baseline
- Final Thoughts
  - Typically compared to the old system
  - Does not necessarily always mean better\*

#### **Standard Distributed Architecture**

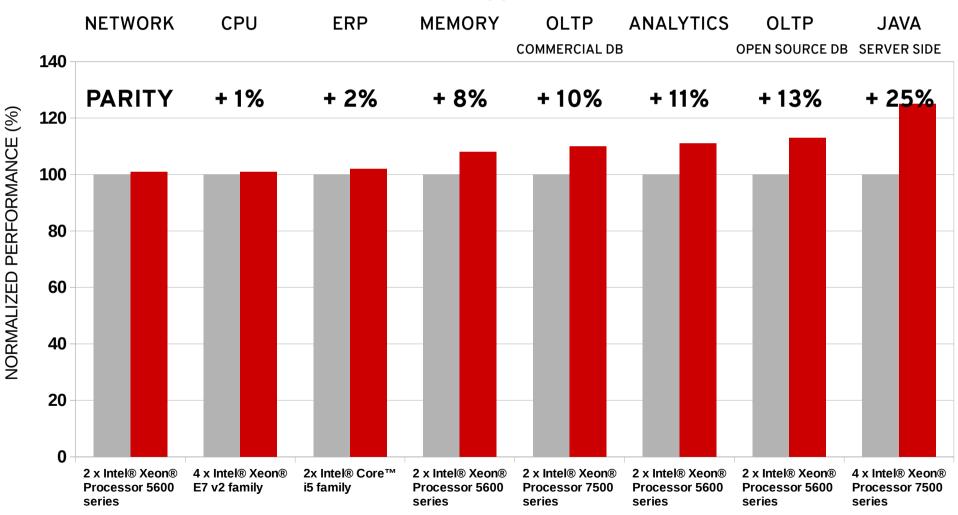

- Master Nodes: HDFS NameNode service, YARN resource manager and MapReduce Job History manager
- Data Nodes: HDFS DataNode service and the YARN distributed NodeManager

#### SOLID PERFORMANCE ACROSS WORKLOADS RHEL 7 VS RHEL 6.5

#### PERFORMANCE GAINS ACROSS WIDE RANGE OF WORKLOADS AND MULTIPLE GENERATIONS OF HARDWARE

■ RHEL 6.5 ■ RHEL 7

## **CHOICE OF FILE SYSTEMS**

- Scale file systems to 500TB with new default filesystem XFS
- Scale to 50TB with ext4
- Btrfs also available<sup>1</sup>
- Parallel NFS v4 provides improved performance and throughput

Туре	Type Supported Limit		Boot	Comments			
		Sin	gle-node				
XFS	500TB	Yes	Yes	System default			
ext4	50TB	Yes	Yes	Driver allow access to older versions (ext2, ext3).			
btrfs <sup>2</sup>	50TB	Yes	Yes				
		Networ	k/Multi-node				
GFS2	2-16 nodes	Yes	No	Shared-storage file system			

<sup>1</sup> Available as a Technology Preview

#### **Tuned Recommendations**

- Physical
  - NameNode and DataNode:
    - tuned-adm profile enterprise-storage
- Virtualized
  - NameNode and DataNode:
    - tuned-adm profile virtual-guest
    - tuned-adm profile virtual-host (for underlying host)

#### **Behind the Scenes**

- Scheduler Changes
  - Deadline executes I/O Operations (IOPs) through the concept of "batches" which are sets of operation
  - ELEVATOR="deadline" # These are the devices, that should be tuned with the ELEVATORELEVATOR\_TUNE\_DEVS="/sys/block/

```
{sd,cciss,dm-,vd}*/queue/scheduler"
```

- Sysctl.conf Changes: Increases latency, but also throughput
  - kernel.sched\_min\_granularity\_ns = 10000000
  - kernel.sched\_wakeup\_granularity\_ns = 15000000
  - # The generator of dirty data starts writeback at this
    # percentage (system default is 20%)
    vm.dirty\_ratio = 40
